

PRODUCT SPECIFICATION

Model No : CSST-NLAPGG4XX-A1X

Descriptions:	
• LED Type	: Single Color SMD LED PLCC2 3.5x2.8 x1.80mm
• Emitting Color	: Green
• Encapsulation	: Silicone Resin

CUSTOMER APPROVED SIGNATURES	APPROVED BY	CHECKED BY	PREPARED BY
			

OPTO PLUS TECHNOLOGIES CO.,LTD

Address : No.696,Yangming North Rd,ShaoXing

City,ZheJiang Province,P.R.China

Tel : 86-575-88623888

Fax : 86-575-88623112

<http://www.csbright.com>

Model No.: CSST- NLAPGG4XX-A1X

■ **Features –**

1. High luminous intensity using InGaN dice Technology
2. High reliability package due to silicone encapsulation
3. Wide viewing angle at 120 °
4. RoHS Compliant
5. Compatible Lead-Free Reflow Soldering process
6. JEDEC MSL 2a

■ **Applications –**

1. General lighting
2. Architecture and entertainment lighting
3. Electronic signs and signals
4. Interior automotive lighting

■ **Absolute Maximum Rating Polarity–**

(Ta=25°C)

Parameter	Symbol	Rating	Unit
Power Dissipation	Pd	108	mW
Forward Current	I_F	30	mA
Peak Forward Current*	I_{FP}	100	mA
Reverse Voltage*	V_R	5	V
LED Junction Temperature*	T_j	110	°C
Operating Temp.	T_{opr}	-40~ +85	°C
Storage Temp.	T_{stg}	-40 ~ +100	°C
Soldering Temp.	T_{sol}	Reflow Soldering : 260°C for 10 sec Hand Soldering : 350°C for 3 sec	

Notes:

1. Pulse width \leq 0.1 msec, duty \leq 1/10
2. Proper current rating must be observed to maintain junction temperature below the maximum at all the time.
3. The device can not operated under continuous reverse voltage

Model No.: CSST- NLAPGG4XX-A1X

Package Outline Dimensions –

Notice: Tolerance of measurement of Dimension: $\pm 0.2\text{mm}$

Unit:mm

Recommended Soldering Pad Pattern

Notice: Tolerance of measurement of Dimension: $\pm 0.2\text{mm}$

Unit:mm

Model No.: CSST-NLAPGG4XX-A1X

■ **Electrical / Optical Characteristics –**

(Ta=25°C)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Condition
Forward Voltage	V_F		3.1		V	$I_F=20mA$
Luminous Intensity	Φ_v		1700		mcd	
Dominant Wavelength	λ_D		525		nm	
Viewing Angle	$2\theta_{1/2}$		120		deg	
Reverse Current	I_R			10	μA	$V_R=5V$

■ **Luminous Intensity Rank Limits ($I_F = 20mA$)**

unit : mcd

Luminous Intensity Part No.	28	29	30
CSST-NLAPGG4XX –A1X	1080-1400	1400-1800	1800-2300

Notice: Tolerance of measurement of Luminous Intensity : $\pm 12\%$

■ **Dominant Wavelength Rank Limits ($I_F = 20mA$)**

unit : nm

Dominant Wavelength Part No.	TG1	TG2	TG3	TG4
CSST-NLAPGG4XX –A1X	515-520	520-525	525-530	530-535

Tolerance of measurement of Dominant Wavelength : $\pm 1nm$

■ **Forward Voltage Rank Limits –**

V_F Rank	Min	Max	Unit	Condition
V2C	2.7	3.0	V	$I_F = 20mA$
V3A	3.0	3.3		
V3B	3.3	3.6		

Notice: Tolerance of measurement of Forward Voltage: $\pm 0.1V$

Model No.: CSST- NLAPGG4XX-A1X

**Typical Electrical / Optical Characteristics Curves –
(Ta = 25°C Unless Otherwise Noted)**

Figure2. Maximum Driving Forward DC Current VS. Ambient Temperature

Model No.: CSST- NLAPGG4XX-A1X

Figure3. Relative Luminous Intensity VS. Wavelength

Figure4. Relative Luminosity VS. Radiation Angle

Model No.: CSST- NLAPGG4XX-A1X

■ **Soldering Characteristics**

IR-reflow Condition (Pb free)

Area	Title	Symbol	Min	Max	Unit
(1)Preheat	Ramp-up rate	Vp	1	5	°C/sec
	temperature	Tp	150	–	°C
	time	tp	–	–	sec
(2)Equilibrium	Ramp-up rate	Ve	–	–	°C/sec
	temperature	Te	150	200	°C
	Time	te	60	120	sec
(3)Reflow	Ramp-up rate	Vr	1	5	°C/sec
	temperature	Tr	220	–	°C
	Time	tr	–	60	sec
	Peak temperature	Trp	–	260	°C
	Peak time	trp	–	10	sec
(4)Cooling	Ramp-down rate	Vc	3	6	°C/sec

Model No.: CSST- NLAPGG4XX-A1X

Hand Soldering (Iron Condition)

Soldering Iron: 30W Max

Temperature 350°C Max (iron tip 260° C Max)

Soldering Time: 3 Seconds Max (Once)

Model No.: CSST- NLAPGG4XX-A1X

■ **Reliability Test Program/ Reliability Test Item**

NO.	Test Item	Standard	Test Conditions	Test	Failure	Units
		Test Method		Duration	Criteri	Failed/Tested
1	Resistance to Soldering Heat	JEITA ED-4701 300 301	Tsld=260°C, 10sec,reflows Pretreatment30°C,70%,168hrs		#1	0/20
2	Solderability (Reflow Soldering)	JEITA ED-4701 300 303A	Tsld=245±5°C,5sec. Lead-free Solder(Sn-3.0Ag-0.5Cu)		#3	0/20
3	Thermal Shock	JEITA ED-4701 300 307	-40°C~110°C 10min dwell, 10sec transfer,	100cycle s	#1	0/20
4	Temperature Cycle	JEITA ED-4701 100 105	-40°C (30min) ~ 25°C (5min) ~ 110°C (30min) ~ 25°C (5min)	100cycle s	#1	0/20
5	High Temperature Storage	JEITA ED-4701 200 201	Ta=110°C	1000hrs.	#1	0/20
6	Temperature Humidity	JEITA ED-4701 100 103	Ta=60°C, RH=90%	1000hrs.	#1	0/20
7	Low Temperature Storage	JEITA ED-4701 200 202	Ta=-40°C	1000hrs.	#1	0/20
8	Room Temperature Operating life		Ta=25°C, IF=20mA	1000 hrs.	#2	0/20
9	Low Temperature Operating life		Ta=-40°C, IF=20mA	1000hrs.	#2	0/20

Model No.: CSST- NLAPGG4XX-A1X

Failure Criteria

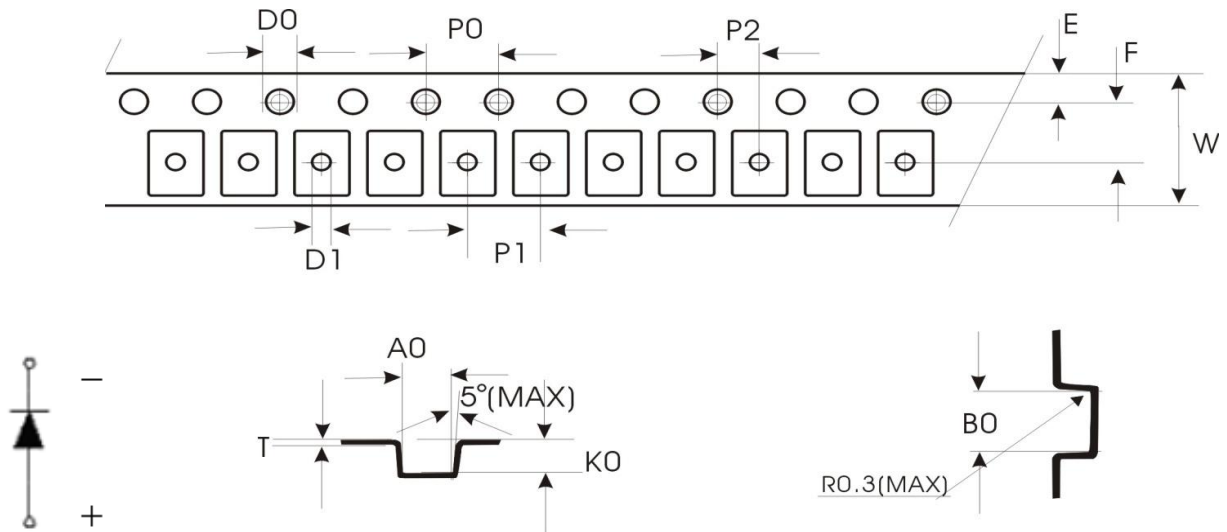

Criteria #	Items	Conditions	Failure Criteria
#1	Forward Voltage(VF)	IF=20mA	>U.S.L.X1.1
	Luminous Intensity(IV)	IF=20mA	<L.S.L.X0.7
#2	Forward Voltage(VF)	IF=20mA	>U.S.L.X1.1
	Luminous Intensity(IV)	IF=20mA	<L.S.L.X0.5
#3	Solderability		Less than 95% solder coverage

U.S.L.: Upper Specification limit L.S.L.: Lower Specification Limit

Model No.: CSST- NLAPGG4XX-A1X

Package –

1. Tape Dimension

Unit: mm

Symbol	A0	B0	K0	P0	P1	P2	T
Spec	3.1±0.1	3.8±0.1	2.1±0.1	4.0±0.1	4.0±0.1	2.00±0.1	0.235±0.1
Symbol	E	F	D0	D1	W		
Spec	1.75±0.1	3.50±0.1	1.5±0.1	1.0±0.1	8.0±0.1		

Model No.: CSST- NLAPGG4XX-A1X

2. Reel Dimension

Unit: mm

Tolerance unless mentioned is $\pm 0.2\text{mm}$

3. Packing Model

Model No.: CSST- NLAPGG4XX-A1X

Packing Amount

Package Name	Package Dimension		Distribution of the layer or box		Total Mount		Note
	Size	Unit	Amount	Unit	Amount	Unit	
Reel	8	mm	1	Reel	2000	Pcs	
Inner Box	265X235X78	mm	5	Reel	10000	Pcs	
Outer Box	540x260x170	mm	4	Inner Box	40000	Pcs	

Model No.: CSST- NLAPGG4XX-A1X

■ Handling of Silicone Resin LEDs-

● **Handling Indications**

- i. When handling the product, do not touch it directly with bare hands as it may contaminate the surface and affect on optical characteristics. In the worst cases, excessive force to the product might result in catastrophic failure due to package damage and/or wire breakage.

- ii. When handling the product with tweezers, LEDs should only be handled from the side and make sure that excessive force is not applied to the resin portion of the product. Failure to comply can cause the resin portion of the product to be cut, chipped, delaminated and/or deformed, and wire to be broken, and thus resulting in catastrophic failure.

● **Pick and place**

Recommended conditions: Outer nozzle $> \Phi 2.4\text{mm}$

Avoid direct contact to the encapsulant with picking up nozzle. Failure to comply might result in pick and place processes or damage to encapsulant. In the worst cases, catastrophic failure of the LEDs due to wire deformation and/or breakage.

■ Storage –

- Storage Conditions

- A. Before opening the package:

The LEDs should be kept at $\leq 40^{\circ}\text{C}$ and $\leq 90\% \text{RH}$. The LEDs should be used within a year. When storing the LEDs, moisture proof packaging with absorbent material (silica gel) is recommended.

- B. After opening the package:

The LEDs should be kept at $\leq 30^{\circ}\text{C}$ and $\leq 60\% \text{RH}$. The LEDs should be soldered within 672 hours (4 weeks) after opening the package. If unused LEDs remain, they should be stored in moisture proof packages, such as sealed containers with packages of moisture absorbent material (silica gel). It is also recommended to return the LEDs to the original moisture proof bag and to reseal the moisture proof bag again.

- If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.

Baking treatment: more than 24 hours at $60 \pm 5^{\circ}\text{C}$

- This product has silver plated metal parts that are inside and/or outside the package body. The silver plating becomes tarnished when being exposed to an environment which contains corrosive gases. Any LED with tarnished leads may lead to poor solderability and deterioration of optical characteristics. Please do not expose the LEDs to corrosive atmosphere during storage.
- After assembly and during use, silver plating can be affected by the corrosive gases

Model No.: CSST- NLAPGG4XX-A1X

emitted by components and materials in close proximity of the LEDs within an end product, and the gases entering into the product from the external atmosphere. The above should be taken into consideration when designing.

Moisture Proof Package –

- When moisture is absorbed into the SMT package it may vaporize and expand during soldering. There is a possibility that this can cause exfoliation of the contacts and damage to the optical characteristics of the LEDs. For this reason, the moisture proof package is used to keep moisture to a minimum in the package.
- The moisture proof package is made of an aluminum moisture proof bag. A package of a moisture absorbent material (silica gel) is inserted into the aluminum moisture proof bag. The silica gel changes its color from blue to red as it absorbs moisture.
- Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation can occur.

Recommended circuit –

- In designing a circuit, the current through each LED must not exceed the absolute maximum rating specified for each LED. It is recommended to use Circuit B which regulates the current flowing through each LED. In the meanwhile, when driving LEDs with a constant voltage in Circuit A, the current through the LEDs may vary due to the variation in forward voltage (VF) of the LEDs. In the worst case, some LED may be subjected to stresses in excess of the absolute maximum rating.

- This product should be operated in forward bias. A driving circuit must be designed so that the product is not subjected to either forward or reverse voltage while it is off. In particular, if a reverse voltage is continuously applied to the product, such operation can cause migration resulting in LED damage.

Heat Generation –

Model No.: CSST- NLAPGG4XX-A1X

- Thermal design of the end product is of paramount importance. Please consider the heat generation of the LED when making the system design. The coefficient of temperature increase per input electric power is affected by the thermal resistance of the circuit board and density of LED placement on the board, as well as other components. It is necessary to avoid intense heat generation and operate within the maximum ratings given in this specification.
- The operating current should be decided after considering the ambient maximum temperature of LEDs.

■ **Static Electricity –**

- Static electricity or surge voltage damages the LEDs. It is recommended that a wrist band or an anti-electrostatic glove be used when handling the LEDs.
- All devices, equipment and machinery must be properly grounded. It is recommended that precautions be taken against surge voltage to the equipment that mounts the LEDs.
- When inspecting the final products in which LEDs were assembled, it is recommended to check whether the assembled LEDs are damaged by static electricity or not. It is easy to find static-damaged LEDs by a light-on test or a VF test at a lower current (below 1mA is recommended).
- Damaged LEDs will show some unusual characteristics such as the leak current remarkably increases, the forward voltage becomes lower, or the LEDs do not light at the low current.

Criteria: (VF > 2.0V at IF=0.5mA)

■ **Cleaning –**

- It is recommended that isopropyl alcohol be used as a solvent for cleaning the LEDs. When using other solvents, it should be confirmed beforehand whether the solvents will dissolve the package and the resin or not. Freon solvents should not be used to clean the LEDs because of worldwide regulations.
- Do not clean the LEDs by the ultrasonic. When it is absolutely necessary, the influence of ultrasonic cleaning on the LEDs depends on factors such as ultrasonic power and the assembled condition. Before cleaning, a pre-test should be done to confirm whether any damage to the LEDs will occur.

Model No.: CSST- NLAPGG4XX-A1X

■ **Change story**

REV.	Date	Change Description
A	2013.06.08	1、 Original Version
B	2016.02.25	1、 Change Forward Current vs. Ambient Temperature 2、 Change Package Outline Dimensions
